## **DETAILED ACTION**

### ***Election/Restrictions***

1. Restriction is required under 35 U.S.C. 121 and 372.

This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1.

In accordance with 37 CFR 1.499, applicant is required, in reply to this action, to elect a single invention to which the claims must be restricted.

Group I, claim(s) 1-44 and 58-64, drawn to a method for driving an LCD by continuously applying a potential difference to the pixel electrodes.

Group II, claim(s) 45-57, drawn to a method for driving an LCD by applying an higher electric field between the liquid crystal layer located between the gate line on the first substrate and the opposing electrode on the second substrate than the electric field being applied to the liquid crystal layer in other regions of the LCD.

2. The inventions listed as Groups I and II do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features for the following reasons: the special technical feature of the Group I invention is the particular timing control of the signal applied to the pixel electrode claimed therein, while the special technical feature of the Group II invention is the particular voltage level controlling circuit applied to different regions of the LCD claimed therein. Since the special technical feature of the Group I invention is not present in the Group II claims and the special technical feature of the Group II invention is not present in the Group I claims, election to a single invention is required.
